The Virginia–North Carolina Alliance for Minority Participation (VA–NC Alliance) seeks highly motivated undergraduate students majoring in a STEM field to apply to the 2024 Summer Research Program. Students are expected to devote at least 40 hours per week to research and other program activities. Emphasis is placed on conducting research in a lab setting where well-defined research goals, frequent communication, and significant contributions from multiple researchers are central to the success of a given project.

Work with faculty in the following research tracks:

Astronomy | Biology | Chemistry | Engineering

Environmental Science | Neuroscience

This program is designed for students interested in scientific research and may be considering graduate school. It requires students to report to lab daily and work independently under the guidance of the faculty and/or graduate student mentors on a research project chosen by the faculty mentor.

Apply by February 2, 2024

<https://lsamp.virginia.edu/summer-research-program>

Eligibility: Enrolled at one of the VA- NC Alliance partner institutions.

United States citizens or permanent residents only.
